Patented Technologies

SoundTube constantly develops new technologies which enhance audio product performance. SoundTube innovations are protected by multiple U.S. and international patents, which explicitly cover SoundTube's enclosure and dispersion technologies. SoundTube actively defends its patents in order to protect SoundTube resellers and end-users.

Technical Data and Specification Tools

SoundTube strives to provide complete and effective technical information and data to dealers, engineers and designers. All data is available from SoundTube or at www.soundtube.com.

Technical data and downloads include:

- EASE™ data - 3-D polar plots
- EASE™ Address - 2-D modeling for distributed systems
- Tech Sheets - technical information and architectural specs for system engineers
- Distributed System Quick Planning Guide - online configuration tool and step-by-step guide are available to assist in the design of effective public area distributed sound systems using Soundsphere omnidirectional loudspeakers

Independent Data Acquisition and Verification

All data for Soundsphere loudspeakers by SoundTube is independently collected from and verified by NWAALabs (www.nwaalabs.com) using their proprietary MACH testing system. All data is collected and analyzed according to ASTM, ISO and AES standards using EASERA, TEF and MLSSA. Full balloon data including both phase and magnitude is compiled into a variety of formats including EASE 4.x, GLL and CLF.

Architectural Specifications

The loudspeaker driver shall consist of one 6.5" (165 mm) polypropylene woofer with a 0.5" (12.7 mm) mylar dome tweeter mounted coaxially.

Performance specifications of a typical production unit shall be as follows: Usable frequency response shall extend from 70 Hz - 20 kHz (± 10 dB). The vertical polar coverage shall be $175^\circ \pm 6$ dB. Measured sensitivity (1 W / 1 M) shall be at least 90 dB. The speaker shall have a rated impedance of 4 Ω . The speaker shall be available for 25, 50, 70, and 100 V modes and shall include 7 power tap selection leads for use with electrical wire nuts or crimp caps. Rated power capacity shall be at least 35 W continuous RMS and conform to EIA-426-B testing. Calculated maximum continuous output at 1 M and shall be 105.5 dB.

The driver shall be constructed of inorganic materials that are impervious to environmental contaminants (weather ozone, UV, chlorine, salt, etc.). The

complete loudspeaker shall be no more than 11.875" (302 mm) in height. The driver shall be mounted in a spherical enclosure made of structural foam polystyrene that is no more than 10" (254 mm) in diameter. The reflector shall be no more than 14.875" (378 mm) in diameter.
